

SPECLAM™

SPECIALTY LAMINATES

Our SPECLAM™ TFL panel collections consist of decor papers thermally fused to 100% Western Pine ultra-low emission particleboard.

When compared directly to blended Fir particleboard, Pine substrates offer critical manufacturing advantages:

- Faster milling speed with less face chip out
- Reduced tool wear resulting in higher yield
- Lighter overall weight per panel

SPECLAM™ TFL panels utilize Low Emission TSCA VI compliant particleboard from the following partners:

[· Collins Pine](#)

[· Plummer](#)

[· Roseburg Missoula](#)

[· Woodgrain Composites](#)
